

## TYRE COUPLINGS

**Universal** Tyre Couplings ensures high torque transmitting capacity in generators and electric motors in various industrial establishments, in a way, the **tyre material** is made from neoprene/natural/synthetic rubber compounds reinforced with Rayon/Nylon/Polyester Cord to give superior rating & long durability, **bore size** is well matched to attain maximum speed (rpm) ensuring minimum to nil slippage of the flexible element out from the coupling assembly in case of any faulty installation.

### RANGE

- Conventional Type (TC-series)
- Multidirectional Type (F-series)
- New Generation Type (PH-series)
- H.R.C. Type
- Bore sizes : 6mm to 280mm

Speed (rev./min.) : From 500 to 7000 rpm.

### Dimension Details

### (TC-Series)

### Minimum Information Required While Sending Enquiry/Order

1. Motor H.P. rating i.e. 15 or 60 H.P. & so on.
2. R.P.M. at which coupling is to run i.e. 650 or 1400 & so on.
3. Bore size in mm i.e. 9 or 15 mm & so on.
4. Coupling Type i.e. TC series or F series or PH series.
5. Machine type.
6. Quantity in nos.

### SECTIONAL VIEW (TC-SERIES)

Upto Size TC/M/017

From Size TC/L/018 & onwards

G\* is the amount by which clamping screws need to be withdrawn to release tyre.

M\*\* is the distance between flanges.

Normally shaft ends may be kept M distance apart, however, they can be kept at larger distance apart. Care being taken that sufficient shaft keyway length is covered by the Hub. The shaft length can also be brought nearer each other keeping in mind the end-play between the shafts to avoid chattering.
